## **DETAILED ACTION**

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification first states that locking ball 17 locks sleeve 12 in place. Later, the specification says that after dropping ball 18 the sleeve moves upwardly to the first position. How does the sleeve move upwardly if ball 17 locks the sleeve in position? Further, the specification states that after the sleeve 12 has moved upwardly the balls 17 and 18 are urged inward to fall down the tubing. It is impossible for the balls to pass through the sleeve 12.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1,2,4 and 5 are rejected under 35 U.S.C. 102(a) as being anticipated by WO 02/061236.

WO discloses a bypass tool (figure 5) incorporated in a drill string. An outer casing 12a has bypass ports 30a there through. Sliding sleeve 52 has a valve seat 34a for receiving a ball 36a. A locking ball 40a lock the sleeve in the open position. This ball partially blocks flow through one of the ports 30a. As to claim 2, two ports 30a are provided. Drill string debris can be flushed out of the one port while ball 40a is located in the other. As to claims 4 and 5, ball 40a is deformable (see abstract).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Neuder whose telephone number is 571-272-7032. The examiner can normally be reached on Tuesday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David J. Bagnell can be reached on 571-272-6999. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
